US Navy Awards Contract for Enhanced Systems Automation

London, Ontario, Canada – Purifics ES Inc. has been awarded another contract from the US Navy. This award for the development of a Supervisory and Quality Assurance & Quality Control System is another in a series of contracts awarded to Purifics for Expert Systems Design.

The contract involves the development of a Quality Assurance & Quality Control (QA/QC) system that complies with the US Navy's enhanced documentation standards for their solid rocket propellant annealing process. Comprehensive QA/QC reports are generated automatically in real time and stored in a Relational Database.

The Supervisory Control System will be housed in an un-manned processing plant and linked by fiber optics to the remote operations facility. Software upgrades to make the system "run time configurable" was a contract element that Purifics undertook and solved.

An attribute of the contract is the installation of LED lamp technology. These ultra energy efficient, all weather status lamps eliminate maintenance and reduce complexity.

Purifics is a technology leader in air & water treatment, process design and control systems. Our strength is in solving problems and simplifying solutions through innovative engineering to achieve environmental & economic benefits.
