

For Immediate Release  
June 22, 2004

Purifics ES Inc., a London based company, hosted an event for the signing of a trade agreement with Daio Engineering Co. Ltd. (D.E.C.) of Tokyo, Japan.

In attendance were representatives of Daio, Industry Canada, National Research Council, Export Development Canada, and the Mayor of London. “Our Corporate Mission is similar to that of Daio Engineering.

We create sustainable development, simplicity, efficiency in the work we do for our clients, reduce or prevent waste, reduce costs and eliminate risk”, says Brian Butters, President of Purifics in the opening statement for the event.

Mr. Brian Butters (President, Purifics ES Inc.) and Mr. Yasuhiro Fujimoto (Senior Managing Director, Daio Engineering Co., Ltd.) sign the international trade agreement. Overlooking is Mr. Seiichi Wada (Daio).

Under the distribution agreement, D.E.C. will develop business opportunities with potential end users and consumers of Purifics’ products and technology. This agreement is the culmination of a two-year relationship between the two organizations. During this time D.E.C. has undergone technical training to effectively apply and engineer Purifics’ products into the market of Japan. Purifics has travelled extensively to Japan to assist and provide applications expertise and knowledge on our advanced purification systems.

“The environmental challenges facing industry are shared throughout the world. It is in tackling these challenges with innovation that our two companies have come together in this partnership. We share a common philosophy of solutions that drive sustainable development. Partnerships such as these enrich the technological foundation upon which advanced solutions are constructed”, says Brian Butters of Purifics.

D.E.C. provides environmental protection technologies and the effective utilization of energy and recycling systems for industrial wastes through its existing expertise and innovation. D.E.C. is an affiliate of Daio Paper Corporation, the third largest pulp and paper manufacturer in Japan.

Purifics is a technology leader in air & water treatment, process design, and control systems. Our strength is in solving problems and simplifying solutions through Innovative Engineering to achieve environmental and economic benefits.
